PROFESSIONAL SUMMARY

Data Analyst with ~2 years of experience building Power BI dashboards, Python automation tools, and SQL-driven data solutions, currently at KKC & Associates LLP across NBFCs, Banks, Insurance companies, and Small Finance Banks. Delivered 10+ Power BI dashboards with row-level security for access control and data privacy, developed 10+ Python tools for data extraction, reconciliation, and manipulation, and automated processing of datasets exceeding 5 crore+ rows. Applies CaseWare IDEA-based audit analytics for fraud detection and risk assessment as an added layer of data quality and control expertise. Delivers internal training on Power BI and CaseWare IDEA. Seeking a Data Analyst role in the financial services sector.

CORE SKILLS

Business Intelligence: Power BI, Power Query, DAX, Advanced Excel (PivotTables, VLOOKUP/XLOOKUP, Macros)

Programming & Data: Python (Pandas, NumPy), SQL, Data Wrangling, Statistical Analysis

Automation: Python Automation, Excel Automation (VBA/Macros), Report Automation, File Reconciliation & Exception Reporting

Audit Analytics: CaseWare IDEA, Fraud Analytics, Benford's Law, Duplicate & Gap Detection, Data Reconciliation, Sampling, Ageing & Trend Analysis, Risk Assessment

IT Audit: Application Control Testing, Backend SQL Validation, Database Validation, General IT Controls (ITGC), Business Logic Verification

Generative AI: ChatGPT, Prompt Engineering, Custom GPTs, LLM-assisted Workflow Automation

PROFESSIONAL EXPERIENCE

Data Analyst Executive — KKC & Associates LLP

June 2024 – Present

Audit Analytics & Data Analytics Practice

- Design and maintain 10+ interactive Power BI dashboards for management and audit reporting, implementing row-level security (RLS) to enforce access control and data privacy across client-sensitive datasets.
- Build Python (Pandas/NumPy) automation scripts to clean, validate, and reconcile datasets exceeding 5 crore+ rows, cutting manual processing time on recurring data and audit tasks.
- Developed 10+ reusable Python tools for data extraction, reconciliation, and manipulation, standardising recurring reporting workflows across engagements.
- Write and optimize complex SQL queries for backend data validation, exception identification, and cross-system reconciliation.
- Apply CaseWare IDEA audit analytics — duplicate detection, Benford's Law, gap detection, ageing and trend analysis, sampling — to strengthen data quality and risk assessment.
- Support IT Audit engagements through application control testing, backend SQL-based validation of business logic, and review of general IT controls (ITGC).
- Worked across engagements for NBFCs, Banks, Insurance companies, and Small Finance Banks, gaining cross-sector exposure to financial services data and regulatory reporting needs.
- Conducted internal training sessions and seminars on Power BI and CaseWare IDEA, upskilling team members on dashboarding and analytics techniques.
- Leverage ChatGPT and prompt engineering, including custom GPTs, to accelerate documentation, query drafting, and repetitive analytical workflows.
- Partner with teams to convert raw client data into structured MIS reports and risk-prioritized findings, supporting faster, more informed decision-making.
- Document analytics methodology and control-testing procedures to ensure consistency, audit-readiness, and knowledge transfer across the team.

KEY PROFESSIONAL PROJECTS

Enterprise MIS Dashboard — Power BI

- Designed and deployed 10+ executive-level Power BI dashboards consolidating financial and operational data for management reporting, with row-level security (RLS) configured for role-based access control and data privacy.

Python Data & Audit Automation Suite

- Built a suite of 10+ Python automation tools for data extraction, reconciliation, manipulation, and Excel/CSV processing, capable of handling datasets of 5 crore+ rows, replacing manual review steps across engagements.

Audit Analytics Framework — CaseWare IDEA

- Developed a structured analytics framework covering duplicate analysis, Benford's Law, gap detection, sampling, trend and ageing analysis to support risk identification across client engagements.

IT Audit — Application & Backend Testing

- Performed application control testing, backend SQL validation, business logic verification, and general IT control testing to assess the integrity and reliability of client systems.

AI Productivity Tools

- Used ChatGPT and prompt engineering, including internal/custom GPTs, to streamline documentation and repetitive analytical tasks, improving workflow efficiency across the team.

Internal Training & Knowledge Sharing

- Delivered seminars and hands-on training sessions within the firm on Power BI and CaseWare IDEA, building internal team capability in dashboarding and audit analytics.

PROFESSIONAL ACHIEVEMENTS

- Designed and deployed 10+ Power BI dashboards with row-level security, adopted for ongoing engagement reporting and access-controlled data sharing.
- Processed and reconciled datasets exceeding 5 crore+ rows using Python and SQL-based automation.
- Reduced manual effort on recurring data and audit tasks by building 10+ Python automation tools.
- Delivered internal seminars and training sessions on Power BI and CaseWare IDEA, upskilling the broader analytics team.
- Gained cross-sector exposure by working on engagements spanning NBFCs, Banks, Insurance companies, and Small Finance Banks.

CERTIFICATIONS

- Google Data Analytics Professional Certificate
- Power BI (Microsoft / Industry Certification)
- Python for Data Analysis

EDUCATION

Bachelor of Engineering (B.E.), Information Technology

CGPA: 8.95 / 10
